<p>The following aircraft were not actually assigned to the 445th Bomb Group but were provided as Pathfinder Force (PFF) lead aircraft. These planes had specialized equipment installed (GEE radio navigation gear and/or the airborne radar set H2X). They would fly in the #1 (group lead position) and usually have a backup aircraft in position #2 (group deputy lead) in case there was a problem in the lead aircraft. Command personnel (command pilot, pilotage navigator and lead bombardier) would come from the 445th with the host organization providing the rest of the crew.</p>
